<b>Afternoon</b>	<p><b>Why do worms make gardeners and farmers happy?</b>  Worms tunnel through soil eating plant and animal material. Their tunnels allow plant roots to travel down, keep the soil aerated and help water drain. And worm 'poo' (called casts) adds nutrients to the soil. You can make your own mini worm farm to see exactly what happens when worms work the soil.</p> <p><b>To make your own worm farm you will need:</b></p> <ul style="list-style-type: none"> <li>• A large plastic bottle (3L juice bottle or similar)</li> <li>• Soil</li> <li>• Sand</li> <li>• Dead leaves</li> <li>• Water</li> <li>• Earthworms</li> <li>• Food wrap</li> <li>• Dark paper</li> <li>• Pencil</li> </ul> <p><b>WHAT YOU NEED TO DO:</b>  Ask an adult to cut off the top of the bottle.  Fill the bottle with layers of soil and sand.  Add 4 teaspoons of water to the soil and put the dead leaves on top of the soil.  Dig around in some soil in your garden and try to find 2 or 3 earthworms to add to the soil in your bottle.  Cover the bottle with food wrap and poke some holes in this with a pencil.  Tape dark paper around the sides of your bottle.  Add 2 teaspoons of water each day to keep the soil damp.  After 2 weeks take the dark paper  You should see tunnels in the soil that the worms have made!</p>
